

TASK6

Key Features

7 features that are unique to MiSsIoN and essential to the hospital's performance.

PREDICTIVE ANALYTICS

Predictive analysis
Predictive analytics is a method of providing improved patient care. Robots collect the data and predict (sometimes before doctors) what will be required for a patient. However, it creates concern about robots' presence.

The advantages of predictive analysis are:

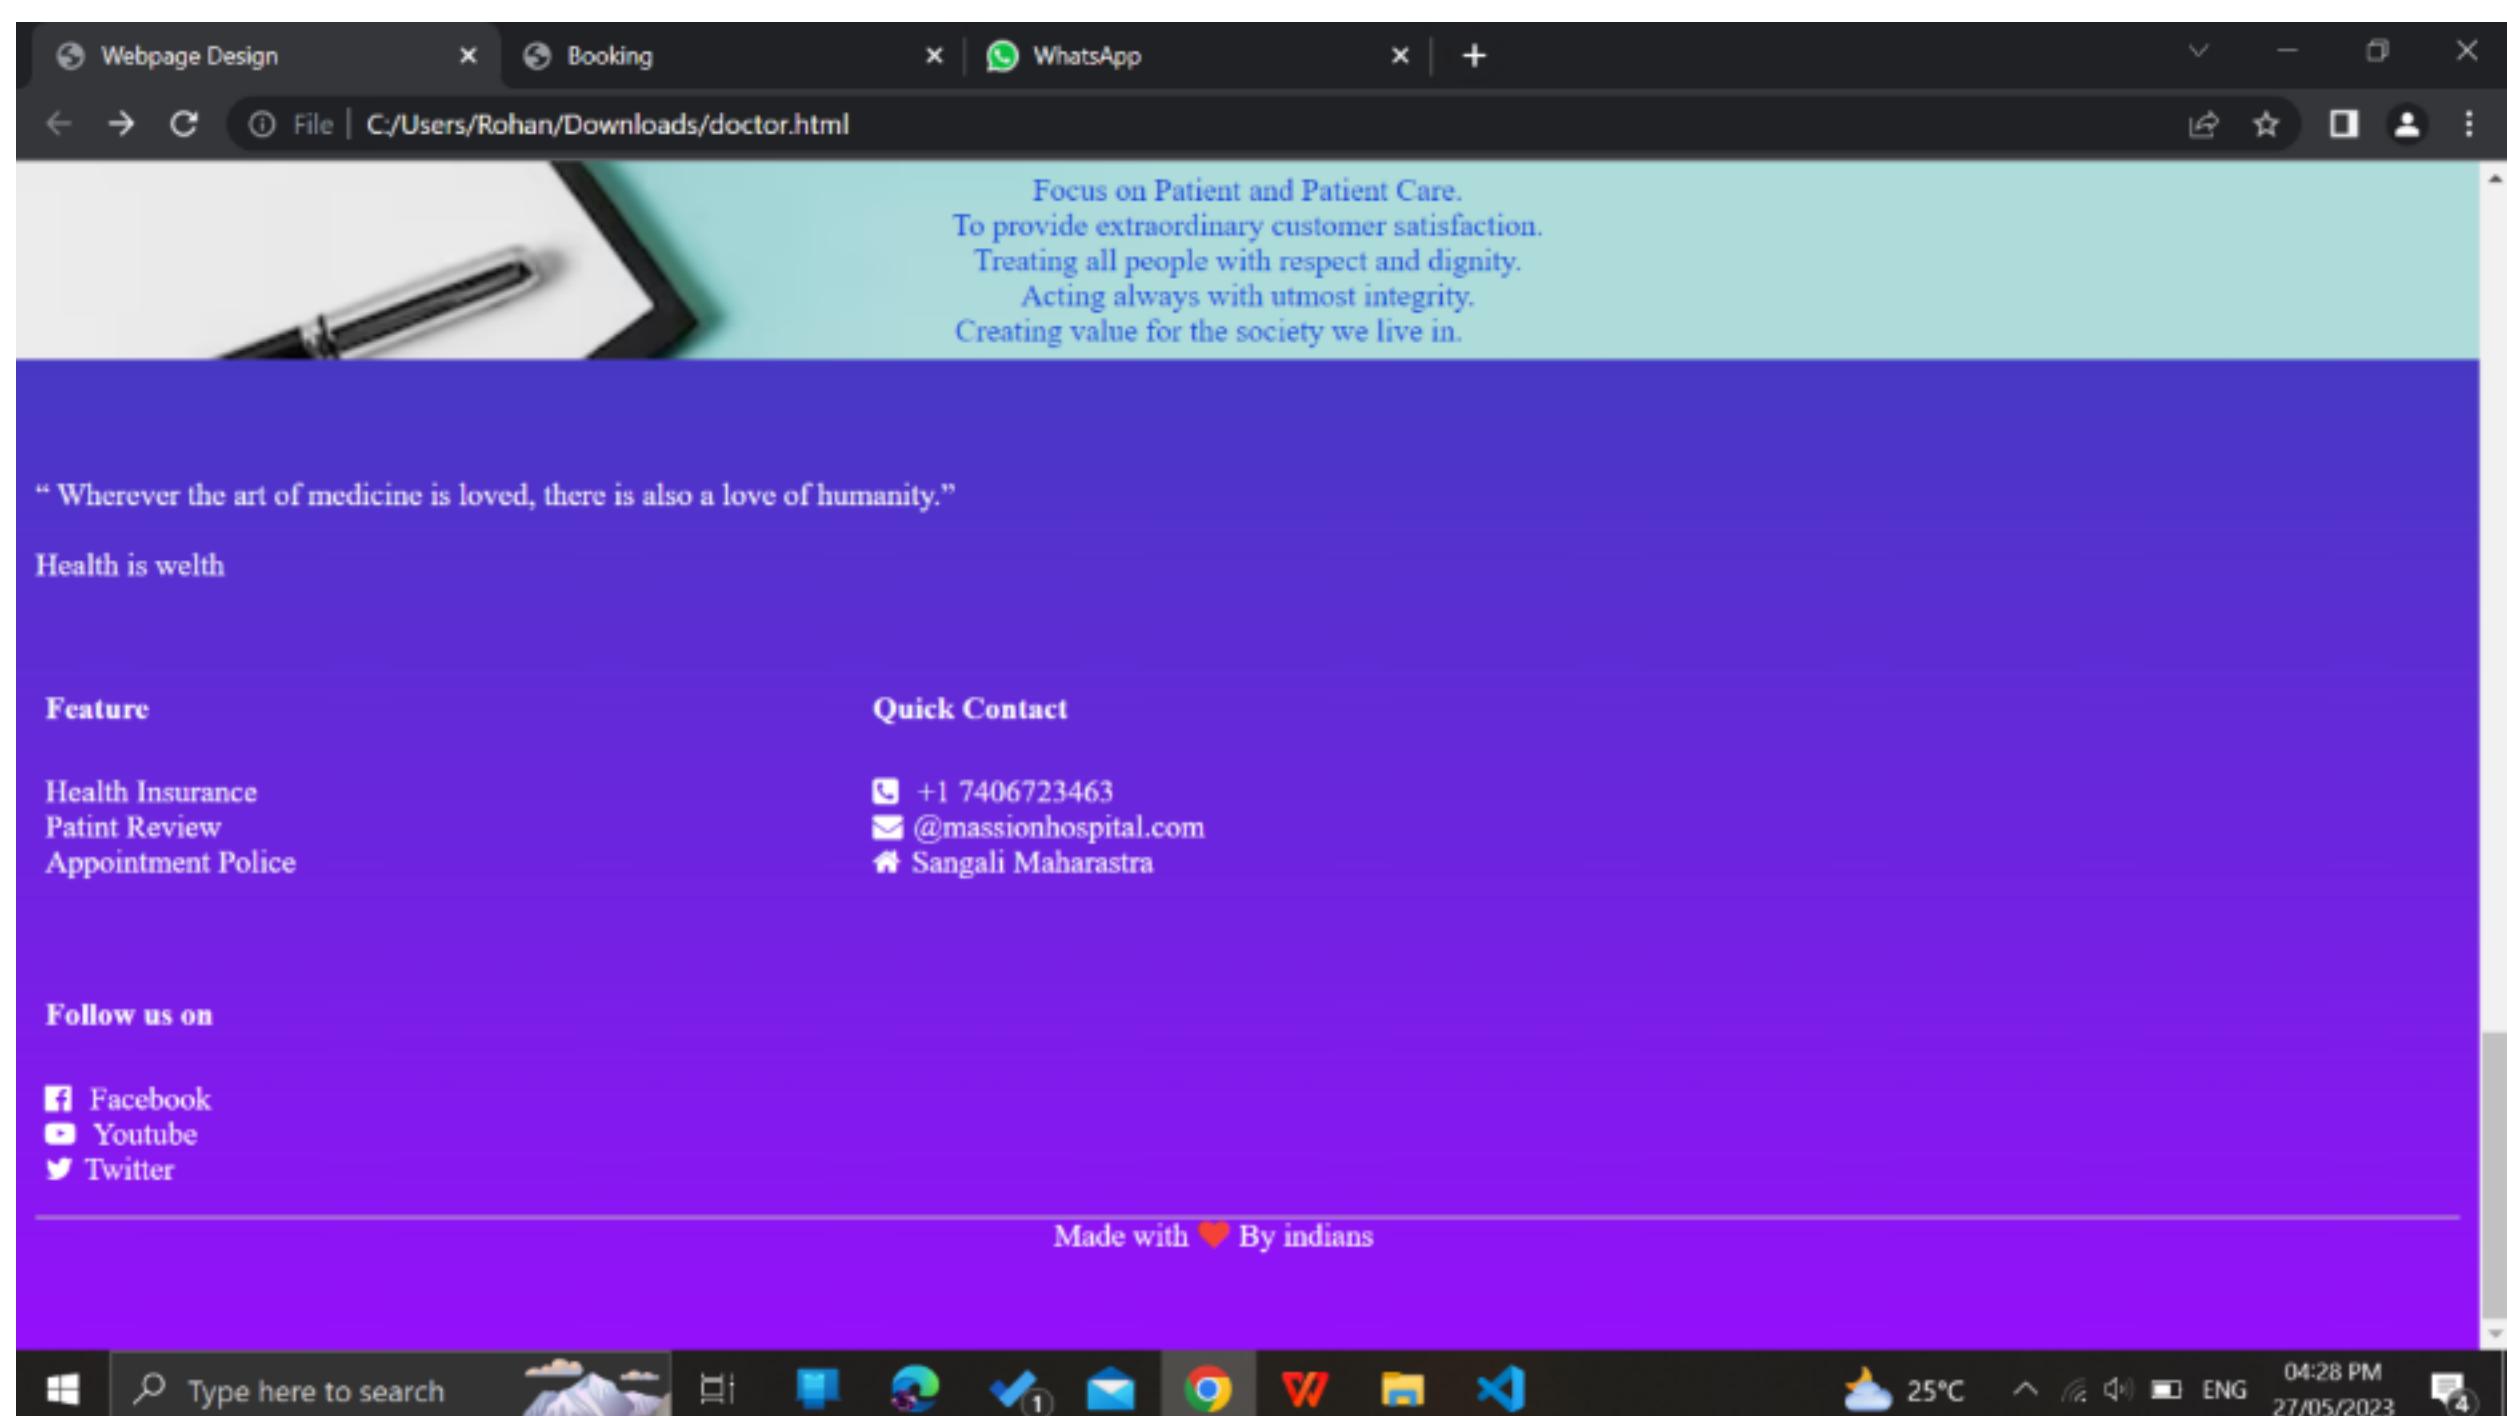

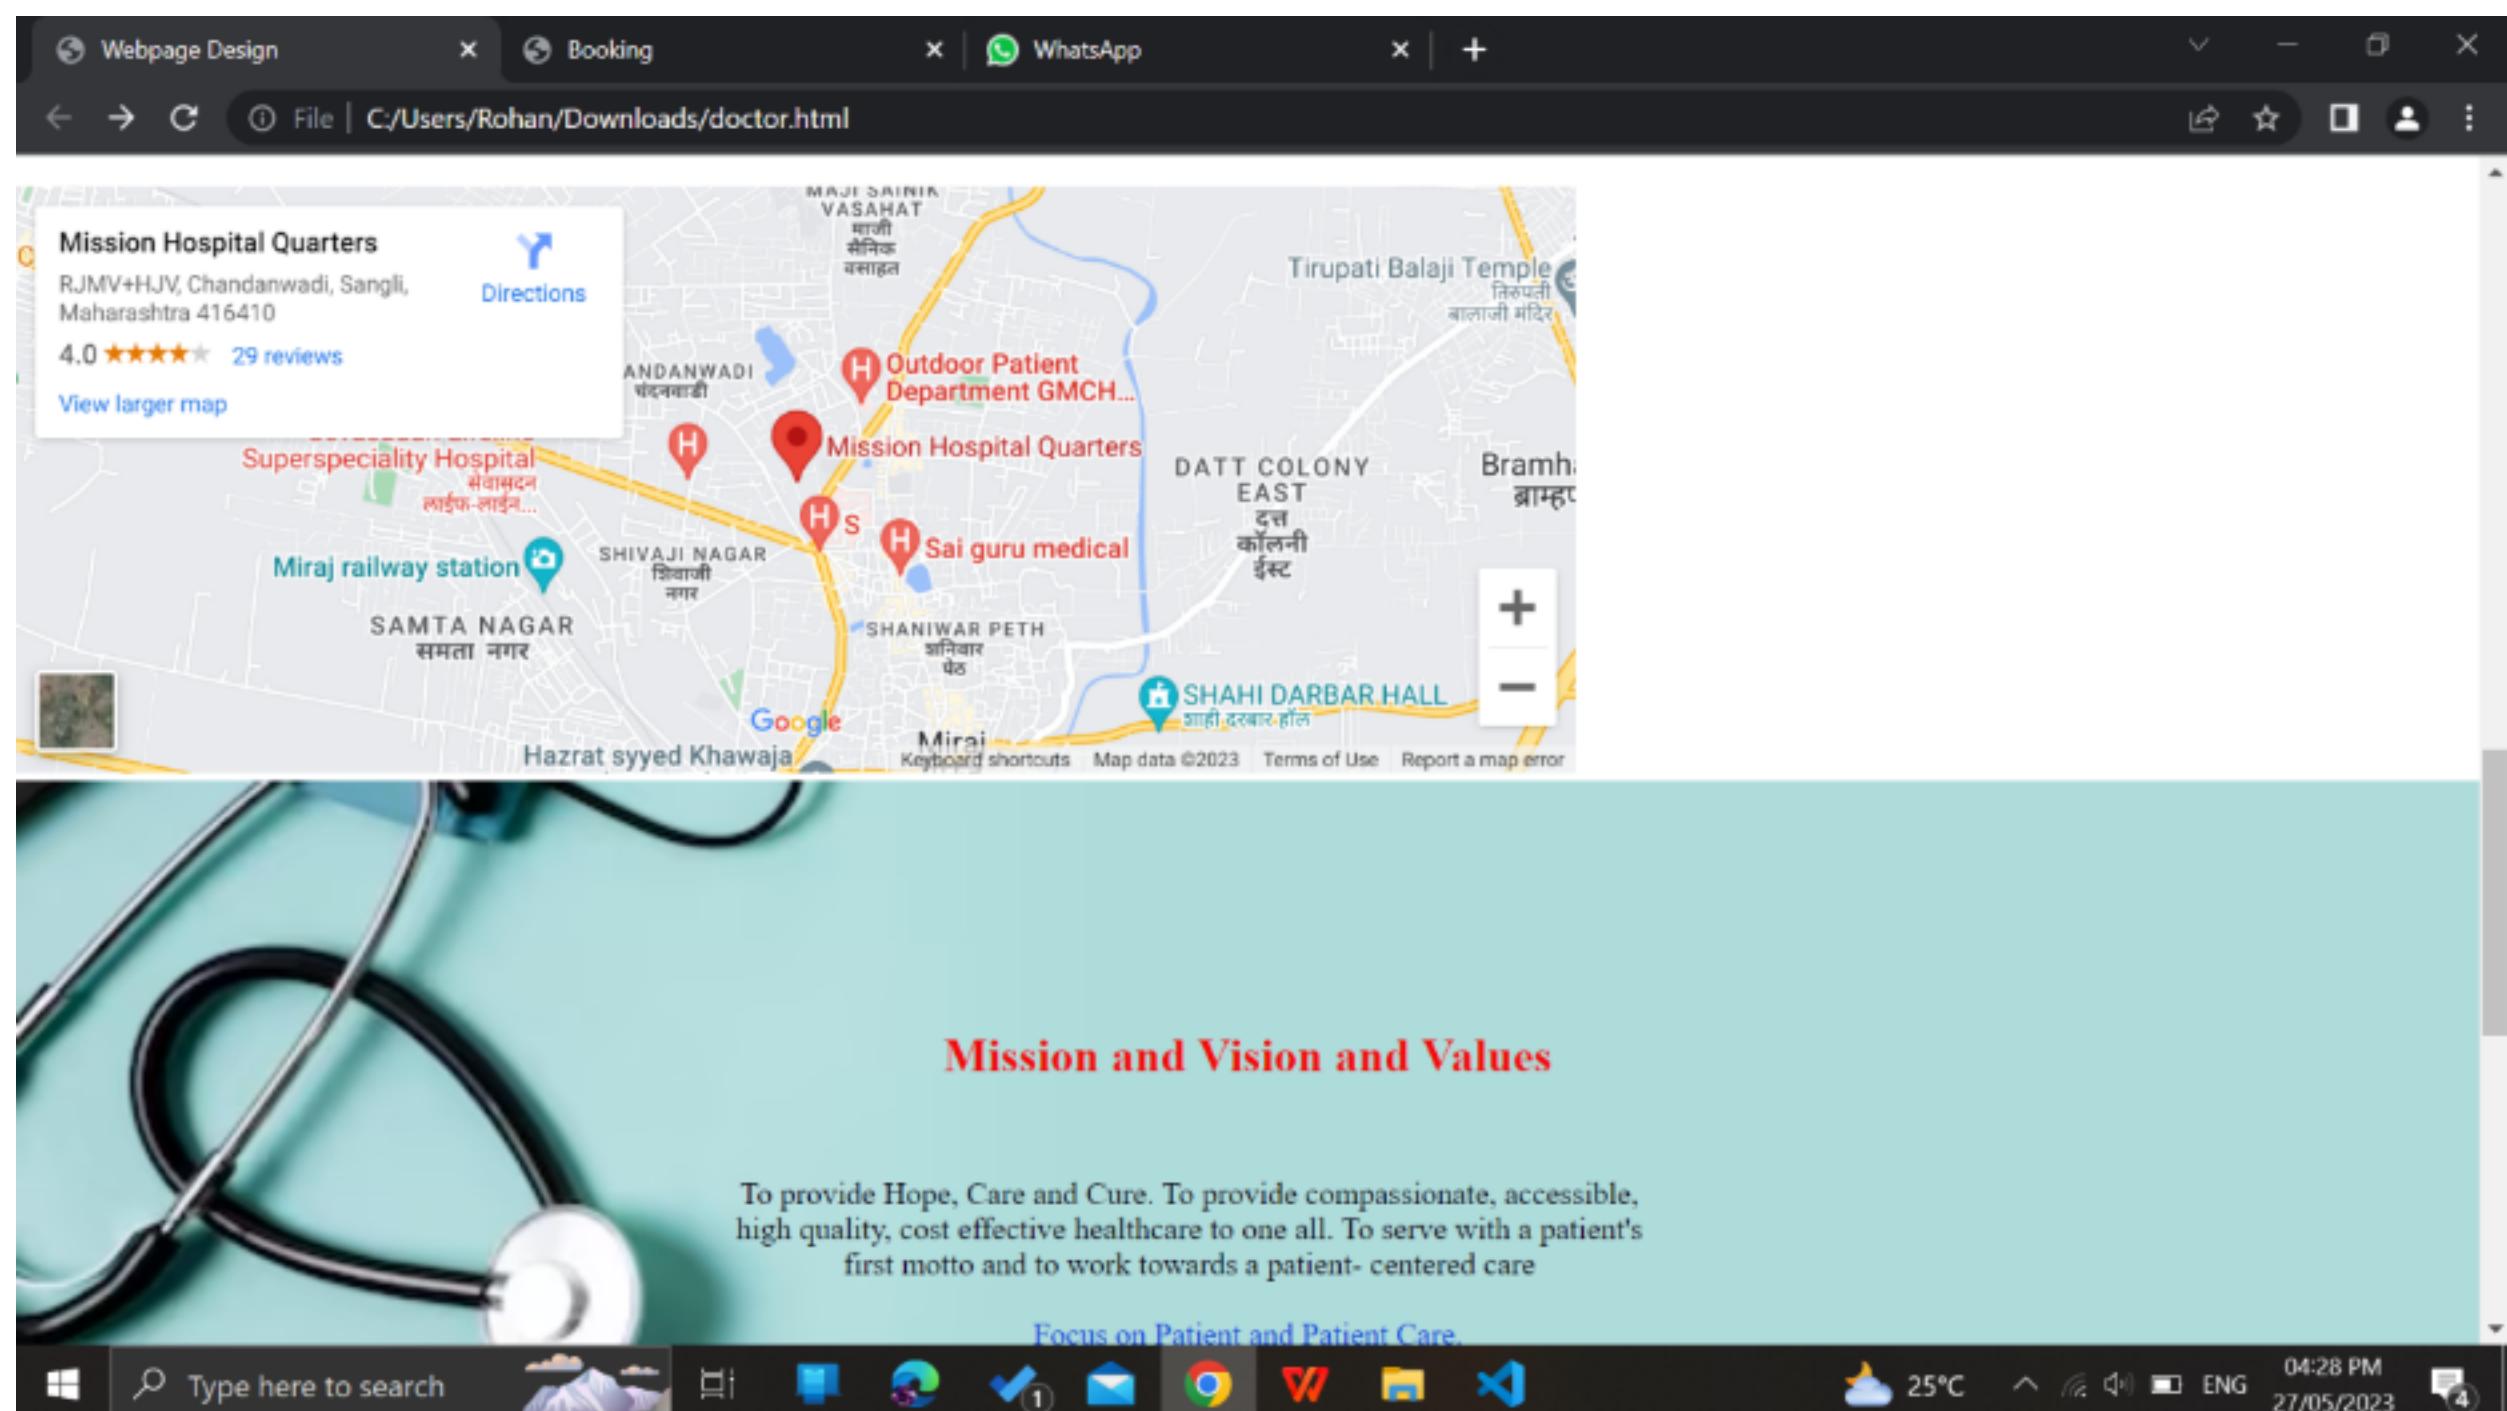

- 1.Improved patient care
- 2.Faster diagnosis

Bioprinting
3D printing is not a new method for the healthcare industry. But in the future, it will be used extensively in more areas rather than surgery.

The advantages of bioprinting are:

- 1.It makes complicated surgeries easier to perform
- 2.Takes very little time for production

Mission Features

Scheduling automation you and your invitees will actually enjoy.

KNOW ABOUT US

We at MISSION Hospital believe in Quality over Quantity. Giving our patients quality care is what we aim at.

Being situated at the auspicious bank of the Krishna river. We at Sangali are surrounded by a number of small villages of whom agriculture is the main source of income. The sugar, Turmeric, Jaggery from this part of the state is exported worldwide.

MiSsIoN

Health Care

Health care, or healthcare, is the improvement of health via the prevention, diagnosis, treatment, amelioration or cure of disease, illness, injury, and other physical and mental impairments in people. Health care is delivered by health professionals and allied health fields

Intensive care medicine

Critical Care: Also called intensive care, this department is for seriously ill patients. Diagnostic Imaging: Also known as X-Ray Department

Accident and emergency

This department (sometimes called Casualty) is where you're likely to be taken if you've called an ambulance in an emergency. It's also where you should come if you've had an accident, but can make your own way to hospital. These departments operate 24 hours a day, every day and are staffed and equipped to deal with all emergencies. Patients are assessed and seen in order of need, usually with a separate minor injuries area supported by nurses.

Radiology

Radiology Services: Facilities, including the number of radiographic machines must be adequate to meet the requirement of the diagnostic and therapeutic ...

Surgery

Surgery is a medical specialty that uses manual and/or instrumental techniques to physically reach into a subject's body in order to investigate or treat pathological conditions such as a disease or injury, to alter bodily functions, to improve appearance, or to remove/replace unwanted tissues or foreign bodies.

to improve appearance, or to remove/replace unwanted tissues or foreign bodies.

emergency Care

The most basic emergency medical services are provided as a transport operation only, simply to take patients from their location to the nearest medical treatment. This was historically the case in all countries. It remains the case in much of the developing world, where operators as diverse as taxi drivers[10] and undertakers may transport people to hospital.

Cardiology

This department provides medical care to patients who have problems with their heart or circulation. It treats people on an inpatient and outpatient basis.

Outpatient: short visit to hospital that lasts no more than a day.

Inpatient: hospital visit that requires at least one night's stay on a ward
